## TegoStrong

IMPRESSIVE LOAD CAPACITY

## UNIFORM STORE DESIGN

TegoStrong offers stability without any front uprights, as with S-shelving or classic heavy-load shelving.

The open front without disruptive structural elements ensures clear lines, a better view of the goods and a higher-quality overall effect at the point of sale.

The harmonious appearance is not disturbed thanks to sustainable special solutions.

## REINFORCED UPRIGHTS

The TegoStrong uprights are made of reinforced steel and offer a significantly higher load-bearing capacity and maximum stability. The stiffer profile reduces deflection with larger spans and ensures that shelves remain level and secure even when densely packed with goods.

Thanks to full compatibility with the 50-mm pitch, all components can be adjusted quickly, precisely and reproducibly.

# TegoStrong

TegoStrong is our advanced shelving system with a 50-mm pitch, designed for higher loads, more presentation space with maximum flexibility in assembly, and made of high-quality materials.

Reinforced uprights ensure increased load-bearing capacity and stability, while the 50-mm pitch enables quick and precise height adjustments. This means that shelf layouts can be adapted to seasonal product ranges or changing product presentations at any time – without interrupting the operations.

Shelves can be combined with mesh or Classic back panels to suit any brand presentation. Robust baselegs and durable components ensure reliable use in high-traffic sales areas.

## Highlights

- Reinforced uprights for significantly higher loads with more product presentation space
- Fully compatible with the TegoClassic range and can therefore be used sustainably

## FULL COMPATIBILITY

TegoStrong can be seamlessly integrated into existing concepts and is fully compatible with the existing TegoClassic range.

Existing components, back panels and accessories can continue to be used and added to the system in a targeted manner – without system discontinuity or visual differences in the store appearance.

## SUSTAINABLE SOLUTION

Thanks to its system compatibility, TegoStrong is ideal as a retrofit solution.

Instead of replacing entire shelving systems, load-bearing elements can be specifically reinforced and modernised – adapted to new product ranges or higher load requirements. Material consumption is reduced, usage cycles are extended and sustainable, and resource saving further development of existing sales areas is seamless.

■ Zuverlässigkeit zählt.

■ Reliability matters.
